

SP Valg 2024 - GSA

Core Matters

1. More activities more inclusiveness.
2. Develop interpersonal & professional skills.

One of our core goals is centered on promoting and developing more inclusive spaces within the university setting. This aim is pursued mainly through the implementation of various activities designed to encourage socialization between international students and their local peers. We have identified a significant gap in the effective integration of foreign students; both in the academic and socio-cultural context. We firmly believe that it is essential to dedicate substantial efforts to build a university community that not only warmly welcomes international students but also encourages them to fully integrate into university life, the city, and the local culture. This initiative seeks to break down linguistic and cultural barriers, promoting an environment of respect, mutual learning, and collaboration. Thus, our efforts are directed at ensuring that each student, regardless of their origin, can find a sense of belonging and support in the institution.

Our focus is to work towards the development of interpersonal and professional skills through different activities among international students in UiB. These skills will help students become efficient enough to join the workforce and excel. We will work on arranging more seminars, workshops, knowledge development sessions, job-skill sessions, and many more activities for international students to make them more skilled, efficient, confident, and job-ready.
